
(a) Held-out accuracy
(b) Depth mechanism
(c) Selection vs. reporting
Pairwise accuracy
Value accuracy (R^2)
mean
Claim gap Δ_π
Selection depth d_π
predicted slope $1-\hat{\beta}=0.39$
uniform: $\hat{b}=0.16$, $R^2=0.97$
supplier-eq.: $\hat{b}=0.37$, $R^2=0.99$
3 suppliers: $\hat{b}=0.33$, $R^2=0.99$
adv. cost
risk averse
conformal select
score perturbation
calibrated report
conformal report
